The story: The software that works for schools

"Teaching is an art that grows with experience and hence practically no software can replace teachers!" says Jayakumar Sambandamurthy, the CEO of **Ciarpro Technologies**, Chennai. His software company specializes in developing innovative and productivity software for schools and education institutions in India. They have recently developed an online education portal called the "**iSchoolWorks**" (ischoolworks.com) that addresses the needs of primary and secondary schools through a set of innovative productivity software.

"At Ciarpro, we believe that productivity is the need of the hour for schools. The fact is that the productivity of the management, staff and students are affected due to various time consuming activities that leaves less time to sharpen their skill / competency. Many activities teachers, students and staff can be automated so that more time and attention can be given for teaching and learning. This helps the school management / authorities to get variety of information, and reports instantaneously.

Mr. Jayakumar Sambandamurthy

Our education portal is a model that delivers the Software as a Service (SaaS) for schools, which is one of the first of its kind in India. Through the online applications, we have automated the process of school activities in specific areas using these productivity tools. In effect we provide online applications that covers Student performance management, school Admission, Attendance Tracker, Leave management, Fee management, online Exams student Information management system, Personnel Information Management system and email / SMS communication to the entire school community and much more." added Jay.

Jay also highlights the fact that there are many companies

in India providing e-learning and content for academics which are neither cost effective nor meeting the needs of the children in total. Hence **iSchoolWorks** provide another channel of service called "**After School**" which is mainly for kids who wants to link to iSchoolWorks and use our online application tools on the academic side as well. It can be registered by their parents on behalf of their kids and some of the modules being offered are free of cost!

Ciarpro Technologies profile

Ciarpro Technologies (www.ciarpro.com) is a technology software organization formed by a team of creative internet application research professionals aiming to provide online application

services through state of the art technology solutions. We have a core team of professionals having a combined experience of over 40 years in software architecture, design, development, consulting and training.
